

Lost Data
Isn't Lost

Pioneers in Forensic Computing Solutions

In today's digital world, data can be fragile, but it is never truly lost. At Field Forensic, we specialize in providing top-tier forensic computer equipment and tools that ensure your data is accessible, recoverable, and protected, either it's from a damaged device, media, or during an onsite or in Lab investigation, analysis.

Extraordinary Products

Damage Media Lab

It is a specialized facility or service that focuses on recovering data from physically or logically damaged storage media. These labs retrieve data from failed hard drives, SSDs, USB drives, memory cards, RAID arrays, and other storage devices.

Chip-Off Lab

A Chip-off Lab is a specialized forensic or data recovery facility equipped to perform NAND flash memory chip extraction from electronic devices (e.g., smartphones, SSDs, USB drives) to recover data when traditional methods fail. This technique involves physically removing the memory chip and reading its contents directly using advanced hardware tools.

Rugged Laptops and Tablets

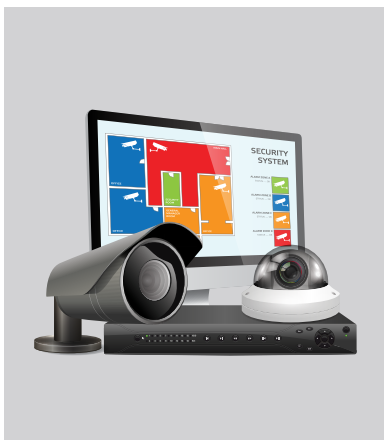

These are built to withstand harsh conditions while providing the power and reliability you need for forensic investigations on the go.

- Military-grade durability
- Long battery life for extended fieldwork
- Secure data storage and encryption
- High-definition touch screens and external connectivity

Onsite Data Acquisition Tools

These are designed for forensic professionals to collect data directly from crime scenes, data centres, or other critical environments. With portable, secure, and reliable data collection methods, we ensure that evidence is captured quickly, accurately, and in full compliance with forensic standards.

DVR Data Extraction Tools

These tools are essential for extracting evidence from digital video recorders (DVRs). These tools help forensic professionals access footage, audio, and other vital data from surveillance systems, providing an invaluable resource for investigations.

- Extraction from multiple DVR and NVR systems
- Supports a wide range of video file formats
- Non-invasive extraction with detailed logs
- Compatible with most popular CCTV brands

Workstations

Workstations are built for intensive forensic analysis. From digital evidence recovery to analysis and documentation, these systems are powerful enough to handle the demands of forensic professionals.

Data Sanitizer

Our Data Sanitizer tools ensure that sensitive data can be completely wiped from any storage device, making it impossible for unauthorized parties to retrieve it.
